VISHNU MITHRAN B

B.Tech. Artificial Intelligence & Data Science | Aspiring Data Analyst & AI Developer

Coimbatore, Tamil Nadu, India | 9487408088 | vishnumithranb@gmail.com | linkedin.com/in/vishnu-mithran-b-6630b7374 | github.com/vishnumithran-b |

SUMMARY

Second-year B.Tech. AI & Data Science student (CGPA 9.2/10) who ships end-to-end web and AI projects in Python, SQL, React and TypeScript. Built a hackathon evaluation platform, an AI study assistant and a Supabase-backed map app. Seeking a data analytics or AI/software internship to apply these skills on real products.

EDUCATION

B.Tech. in Artificial Intelligence & Data Science | Rathinam Technical Campus, Coimbatore | [2025]–2029 (expected)

CGPA: 9.2/10 (in 1&2nd Semester). Coursework: Data Structures & Algorithms, DBMS, Machine Learning, Java, Statistics.

PROJECTS

StudyEase AI – AI Learning Assistant for Engineering Students | React, Vite, Tailwind CSS, Framer Motion | https://github.com/vishnumithran-b/StudyeasyAI

- Reduced the manual effort of exam revision for [N] test users / [X]% of sessions, as measured by [time saved or feature usage], by building an AI assistant that turns study material into summaries, quizzes, flashcards and a key-term glossary.
- Helped learners focus on the topics they struggle with, as measured by per-topic weak-area scores, by implementing learning analytics that rank topics for revision.
- Enabled hands-free revision, by integrating text-to-speech into a responsive learn, practise, review and improve workflow.

OpenJudge AI – Innovation Competition Evaluation Platform | React, Tailwind CSS | Built at [SignalQuest Hackathon, CMRIT Bangalore] | https://github.com/vishnumithran-b/Openjudge_AI

- Replaced manual, inconsistent judging for [N] teams, as measured by [time per entry or judges who used it], by building a platform that scores entries on originality, feasibility, impact and presentation.

- Made entries directly comparable across judges, by structuring all scoring around one consistent four-criteria rubric.
- Shortened the evaluation workflow, by designing a clean, minimal interface for judges and organisers. [Add outcome, e.g. judge feedback or placement, only if true.]

SlotSense – Web Application | React, TypeScript, Vite, Tailwind CSS, Supabase, Leaflet | https://github.com/vishnumithran-b/Slotsense

- Delivered a responsive app with persistent data and an interactive map view, as measured by [N] core features shipped, by integrating Supabase for storage and Leaflet for mapping.
- Kept the codebase maintainable and type-safe, by enforcing TypeScript checks and ESLint throughout. [State what SlotSense does for users in one line.]

Global Internship Finder – Internship Search Platform | TypeScript, HTML, CSS, Vite | https://github.com/vishnumithran-b/Internship-FINDER

- Simplified internship discovery for students across [N] countries, as measured by [N listings or filters], by building a searchable web app with related course recommendations.
- Improved usability on mobile and desktop, by developing a responsive TypeScript interface with straightforward navigation.

Interest Explorer – Compound Interest Calculator | HTML, CSS, JavaScript, Chart.js | https://github.com/vishnumithran-b/Interest-Explorer

- Made investment growth easy to understand, as measured by real-time maturity amount and total interest outputs, by building an interactive calculator with adjustable principal, rate and duration.
- Visualised year-by-year growth, by plotting results in a Chart.js graph.

TECHNICAL SKILLS

Languages: Python, Java, C, SQL, JavaScript, TypeScript

Web & Frameworks: React, Next.js, Vite, HTML, CSS, Tailwind CSS

Data & AI: Jupyter, Prompt Engineering; learning Machine Learning and Power BI

Tools & Cloud: Git, GitHub, AWS, Supabase, ESLint

Core Areas: Data Structures & Algorithms, Databases, Full-Stack Development

CERTIFICATIONS

- AI Fundamentals – Google
- Complete Guide to SQL for Data Engineering – LinkedIn Learning
- HTML and CSS in Depth – Meta
- Introduction to Software Engineering – IBM
- Introduction to Cloud Computing – IBM
- Problem Solving Using Computational Thinking – University of Michigan

ACTIVITIES

- Hackathon participant: collaborated with teams on prototypes and technical presentations
- teaches over 200+ students as part of a college event named Arivupattarai
